Winter Woes? We Can Help!

Ice Dams

Heat escapes the living area of your home, rises & warms the blanket of snow on your roof. Melting snow flows down the slope only to refreeze on top of the unheated overhangs. Ice builds up and the cycle continues. Water collects behind the dam and gradually leaks beneath the shingles with thawing and re-freezing. A leak can take up to 6 months to show up inside your home.

Get a Free 17-Point Roof Inspection. We will check for missing, damaged, or loose shingles. We will inspect your guttering, & attic ventilation.

We will share our findings with you and if needed give you a Straight-Forward Priced Repair Estimate.

When the snow falls and stays, you can enjoy the warmth of your home without worries about leaks showing up later.

Window Frost

Frost forms when your windows are exposed to moist air inside your home and cold air from the outside. As it melts, the moisture transfers to whatever is next to the window; wood and drywall can be damaged. Over time mold can form.

Weatherize your windows with caulk and weather stripping.

Consider replacing old single pane windows with new energy-efficient double pane windows with Low E argon gas.
